TRACTOR SAFETY AND WARNING MESSAGES

Max 8 Hours on Meter per 24 Hours - All Rates Plus Tax, Fuel, & Optional Equipment

This item contains one or more chemicals known to *the* State of California to cause cancer, birth defects or other reproductive harm.

***** CALL 1-800-227-2600 BEFORE YOU DIG *****

For liability risks, please refer to **California Government Code 4216.6 through 4216.7** which stipulates fines of up to \$50,000 for noncompliance. By signing this contract, the lessee **or renter accepts all liabilities and responsibilities** contained in the regional notification center law. []

Call Before You Dig

Call well in advance so you can work safely.

Call Underground Service Alert at 1-800-277-2600 at least two full working days before you dig or move earth in any way. USA will arrange to mark underground power lines and other utilities so you can work safely.

If you don't call and you hit **an underground line, you could be hurt or killed**. You may also be held liable for damages.

*White-line your excavation route, so locators can easily mark the affected utilities.

*Wait the required time. Allow utilities the two working days to locate and mark lines.

*Respect the marks, and dig with care.

Don't take chances. Hitting a buried power line can have life-threatening consequences for you, your co-workers, and others nearby.

Beware of Overhead Power Lines

Stay at least 10 feet away from overhead **power lines**.

Survey your job site every day to find overhead power lines, poles, and guy wires.

*Point out power lines at your work briefings.

*Assume all overhead lines are energized and potentially dangerous, including the service drops that run from utility poles to buildings.

Clearly mark boundaries to keep workers, vehicles, and equipment at least 10 feet away from overhead lines.

Higher voltage requires greater clearance.

If Your Equipment Contacts a Power Line

Stay on the equipment and warn others away.

*Move the equipment away from the line, if you can do so safely.

*Stay on the equipment until utility workers say it's safe to get off.

*Warn others away. Anyone on the ground who touches the equipment may be injured or killed.

*Have someone call 911 and SMUD **immediately at 1-888-742-7683**.

If fire forces you off, jump clear, keeping both feet together and without touching the equipment and the ground at the same time. Shuffle away with small steps, keeping your feet together and on the ground. Or, hop away on two feet, keeping your feet together.

Don't Risk It! Use a Spotter

A spotter helps you stay clear of overhead lines.

No equipment operator working alone can safely judge the distance from the equipment to overhead power lines.

Work with a spotter whose only responsibility is to keep you and your equipment a safe distance from overhead lines and other hazards. When a crane or other equipment hits an overhead power **line**, workers on the ground guiding the load are in the most danger. Electricity **can travel** through the tag line and through you.

Don't risk injury or death by trying to guide a load and spot at the same time. Rely on a designated spotter to help keep you clear of power lines.
